

Question 1: -

Code: -

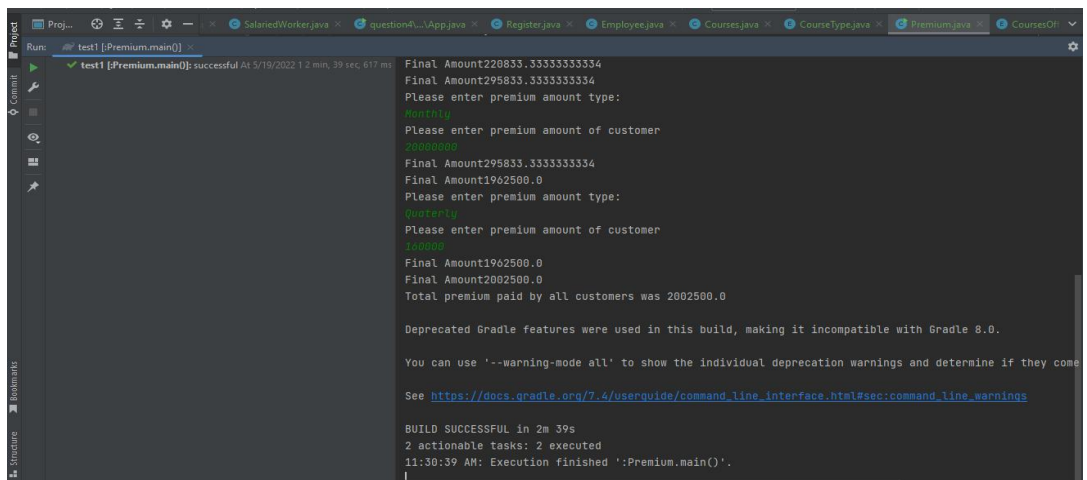

```
1 package com.softura.test1.question1;
2
3 import java.util.Scanner;
4
5 public class Premium {
6     public void premiumAmountPaid(){
7         Scanner scanner = new Scanner(System.in);
8         System.out.println("Please enter number of customers");
9         int numberOfCustomers = scanner.nextInt();
10
11         int[] premiumPaid = new int[numberOfCustomers];
12
13         double finalAmount = 0;
14
15         for (int i = 0; i < premiumPaid.length; i++){
16             System.out.println("Please enter premium amount type: ");
17             String premiumAccountType = scanner.next();
18             System.out.println("Please enter premium amount of customer ");
19             double premiumAmount = scanner.nextDouble();
20             scanner.nextLine();
21
22             System.out.println("Final Amount"+finalAmount);
23
24             switch (premiumAccountType) {
25                 case "Monthly" -> {
```

Outputs: -

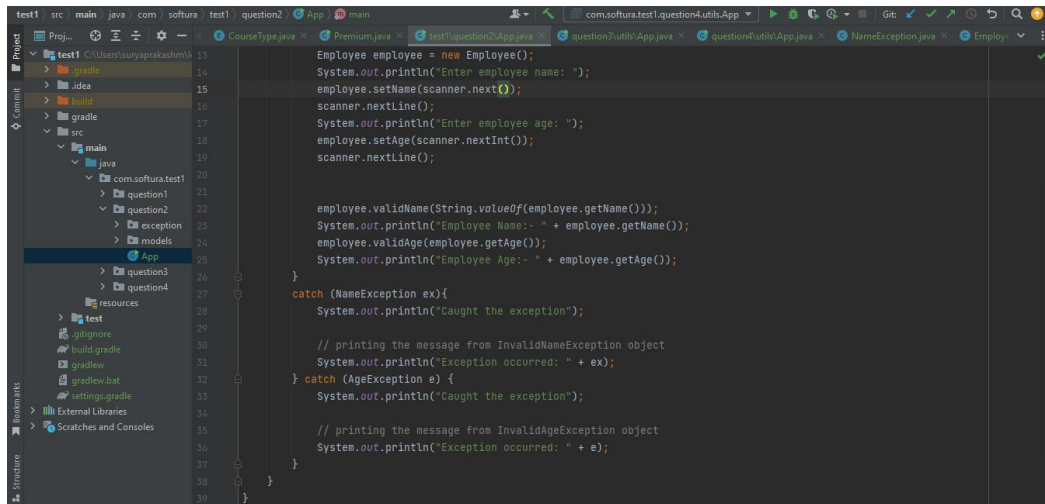

```
11:27:59 AM: Executing ':Premium.main()'...
